a. Choose six bank raiders. They don't all have to be of the same type.

b. Carefully examine the plant for small animals. Clues to look for are:

Holes in the leaves
Holes bored in the stem
Eggs - laid on the underside of the leaf

Look under the leaves as well on top, in the flowers and on the stems. Some animals are very good at camouflage so check carefully. Only record animals which are actually **on** your plant.

c. Identify any animals using the picture sheet and the hand lens. Be careful - insects are very fragile and we don't want to hurt them - especially if they're being useful and eating the aliens!

d. Record your results on the table below. For each animal say where it was found and how many there were. (If you have over 50 animals of one sort on a plant, just record "more than 50" - don't try and count them all!)

Plant	Animal Found	Where was the animal (Tick Box)			How many did you find on the plant?	Leaf Damage (Tick Box)	
		Flower	Leaves	Stem		Yes	No
